	A5	Revision Dimensions "D" : 3.9±0.5→3.7±0.5	2018/12/24	Heter	Roger
	A6	Revision Dimensions "D" : 1R5~3R3: 3.7±0.5→3.4±0.5	2019/1/30	Heter	Roger

- Low profile
  - Low core loss and low DCR
  - High rated current
  - High performance (Isat) realized by metal dust core
  - RoHS compliant and Halogen Free
  - Low EMI and low noise
- 
- Voltage Regulator Module
  - DC/DC converters
  - Thin type on-board power supply module for exchanger
  - Graphics cards
  - Laptops and PCs
  - SSD modules

1. All test data is referenced to 23±3 °C and 45%RH to 70%RH ambient.
2. Test Instruments 3260B LCR Meter, 3265B Bias Current Source 100kHz,1V EUCOL-U2516B DC Low ohm meter.
3. Operating temperature range - 55 °C to + 125 °C ambient + self-temp. rise .
4. Isat: DC current (A) that will cause L<sub>0</sub> to drop approximately 30 %.
5. Idc: DC current (A) that will cause an approximate ΔT of 40 °C.
6. The part temperature (ambient + temp. rise) should not exceed 125 °C under worst case operating conditions. Circuit design, component placement, PWB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the end application.
7. The rated current as listed is either the saturation current or the heat rating current depending on which value is lower.

➤ Provision to Abnormal Condition

This molded power inductor itself does not have any protective function in abnormal condition such as overload, short-circuit and open-circuit conditions, etc. Therefore, it shall be confirmed as the end product that there is no risk of smoking, fire, dielectric withstand voltage, insulation resistance, etc. in abnormal conditions to provide protective devices and/or protection circuit in the end product.

➤ Temperature Rise

Temperature rise of molded power inductor depends on the installation condition on end products. It shall be confirmed on the actual end product that temperature rise of molded power inductor is in the limit of specified temperature class.

➤ Dielectric Strength

Dielectric withstanding test with higher voltage than specific value will damage insulating material and shorten its life.

➤ Water

This molded power inductor must not be used in wet condition by water, coffee or any liquid because insulation strength becomes very low on the condition.

➤ Potting

If this molded power inductor is potted in some compound, coating material of magnet wire might be occasionally damaged. Please ask us if you intend to pot this molding.

➤ Detergent

Please consult our company once in case of this because the confirmation of reliability etc.1 is needed when the washing medicine is used for the molded power inductor.

➤ Notes

This electronic component has been designed and developed for usage in general electronic equipment only, not for usage in areas such as military, aerospace, aviation, transportation (automotive control, train control, ship control) etc.. TDG Holding Co., Ltd. must be informed about the in-
